Sheet 04

Exercise 1

Consider the entity relationship diagram from exercise sheet 2:

Create a relational schema out of the ER-Diagram. Underline keys and find appropriate data types.

Solution:

The un-refined translation yields the following relations for the entities in the model:

- City : {[name : string, state : string]} (1)
- Station : {[name : string, #platforms : integer]} (2)
- Train : {[trainNo : integer, #wagons : integer]} (3)

For the relationships in the model, we create the following relations:

- located_in : {[stationName : string, cityName : string, cityState : string]} (4)
- start : {[trainNo : integer, stationName : string]} (5)
- end : {[trainNo : integer, stationName : string]} (6)
- connects : {[fromStationName : string, toStationName : string, trainNo : integer, departure : date, arrival : date]} (7)
